ADVANCED ENTERPRICE RESOURCE PLANNING

Company: Hayleys PLC

Concepts

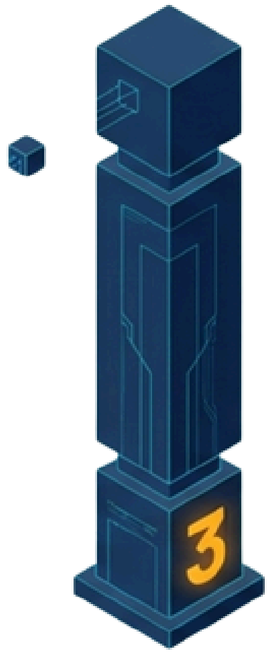

Enterprise Resource Planning brings key business functions into a single, synchronized system.

Objectives

Diagnose
Hayleys current organizational structure, organizational major processes, and legacy information systems.

Integrate
Identify the specific ERP modules required to eliminate friction and unify functional areas.

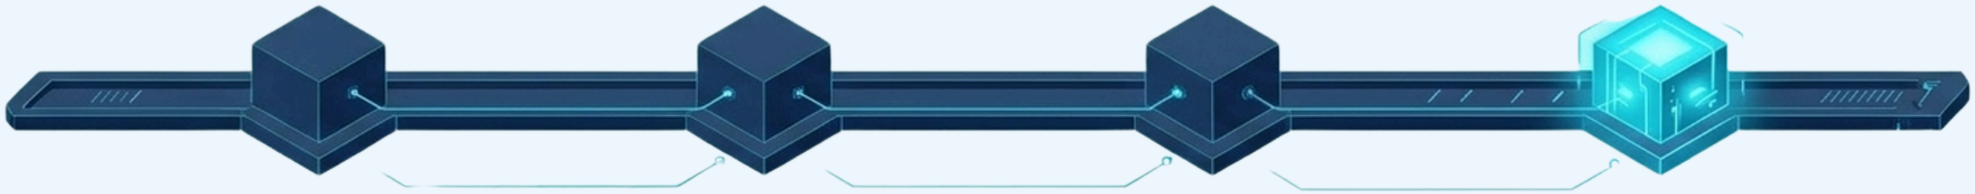

Architect
Propose a scalable, three-tier ERP solutiom architecture.

1878: Founded in Galle by Chas. P. Hayley

1954: Becomes a public company.

1973/1976: Enters manufacturing.

Sri Lanka's leading diversified business groups

Rs. 492.20 Billion

Revenue (Highest in operating history; +13% YoY)

Rs. 510.69 Billion

Assets

38,029

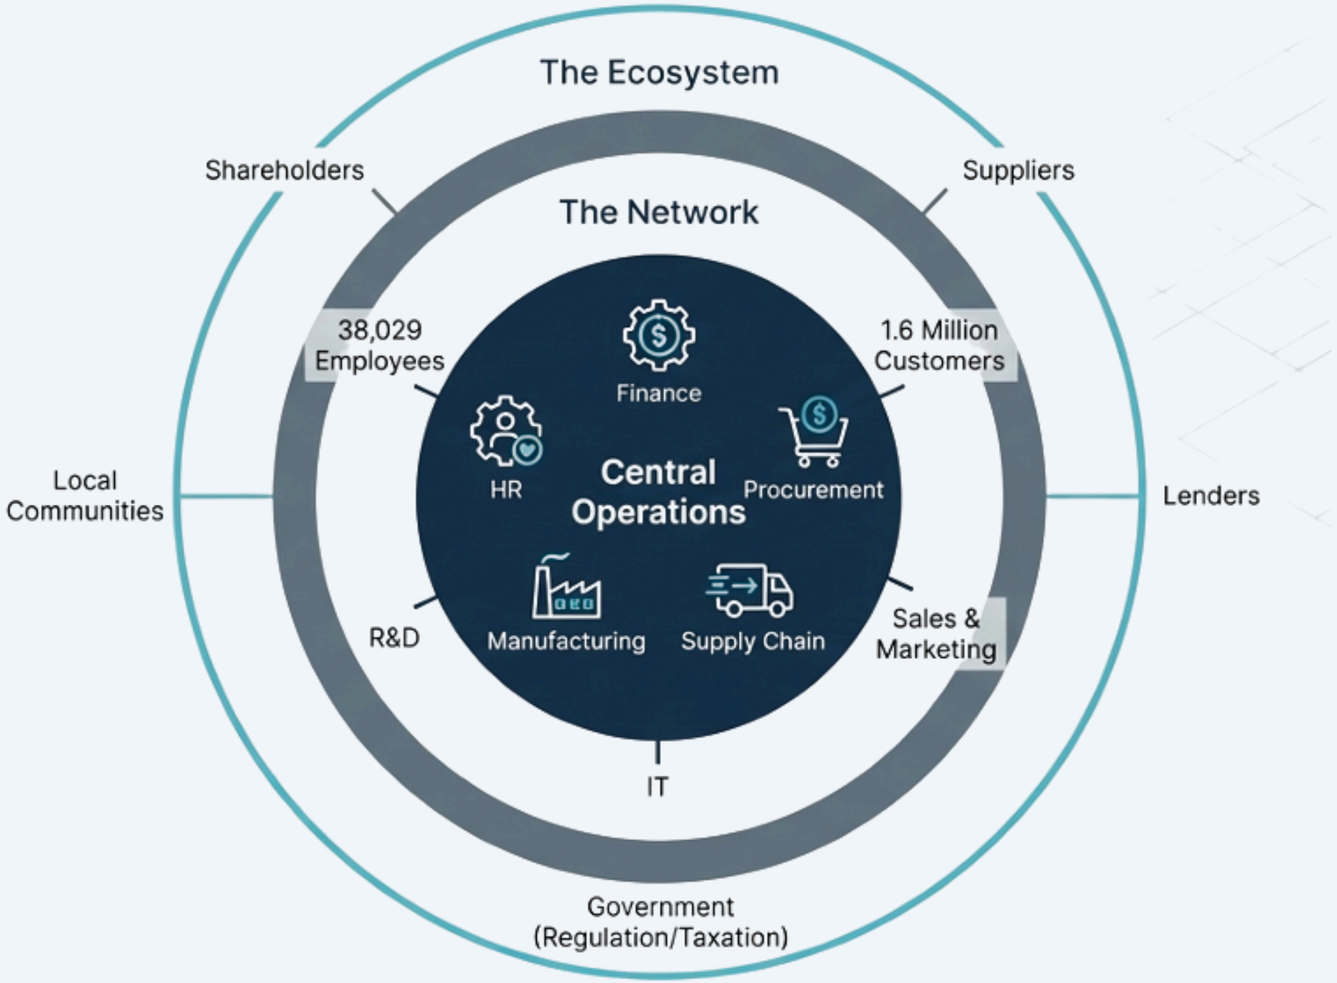

Employees

80+

Market presence in countries (53% of revenue from exports)

95 Manufacturing Facilities (Across **Sri Lanka, Thailand, Indonesia, India, Bangladesh**)
+405 Singer retail outlets.

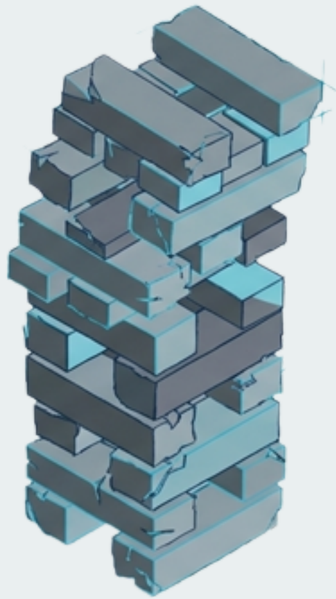

Stakeholders & Functional Areas

- **Procurement decisions affect suppliers**
- **Production affects local communities**
- **Sales impact the 1.6M customer base and ultimately**

Why Hayleys Needs ERP

The Burden of Scale

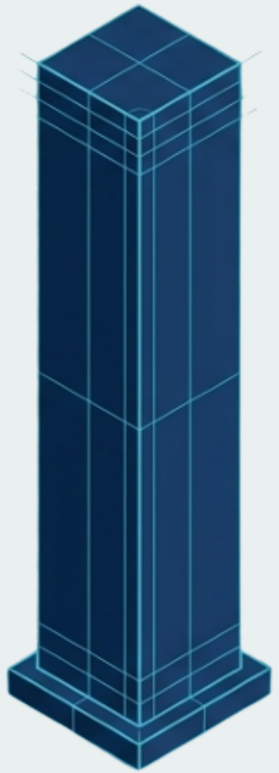

Operations spanning 20+ countries.

Multiple currencies, suppliers, and disjointed supply chains.

Constant duplicate data entry across 16 distinct business sectors.

The Tipping Point: Scale demands integration.

The Integration Imperative

Single source of truth for raw materials, inventory, and finance.

Real-time stock level visibility across 95 facilities.

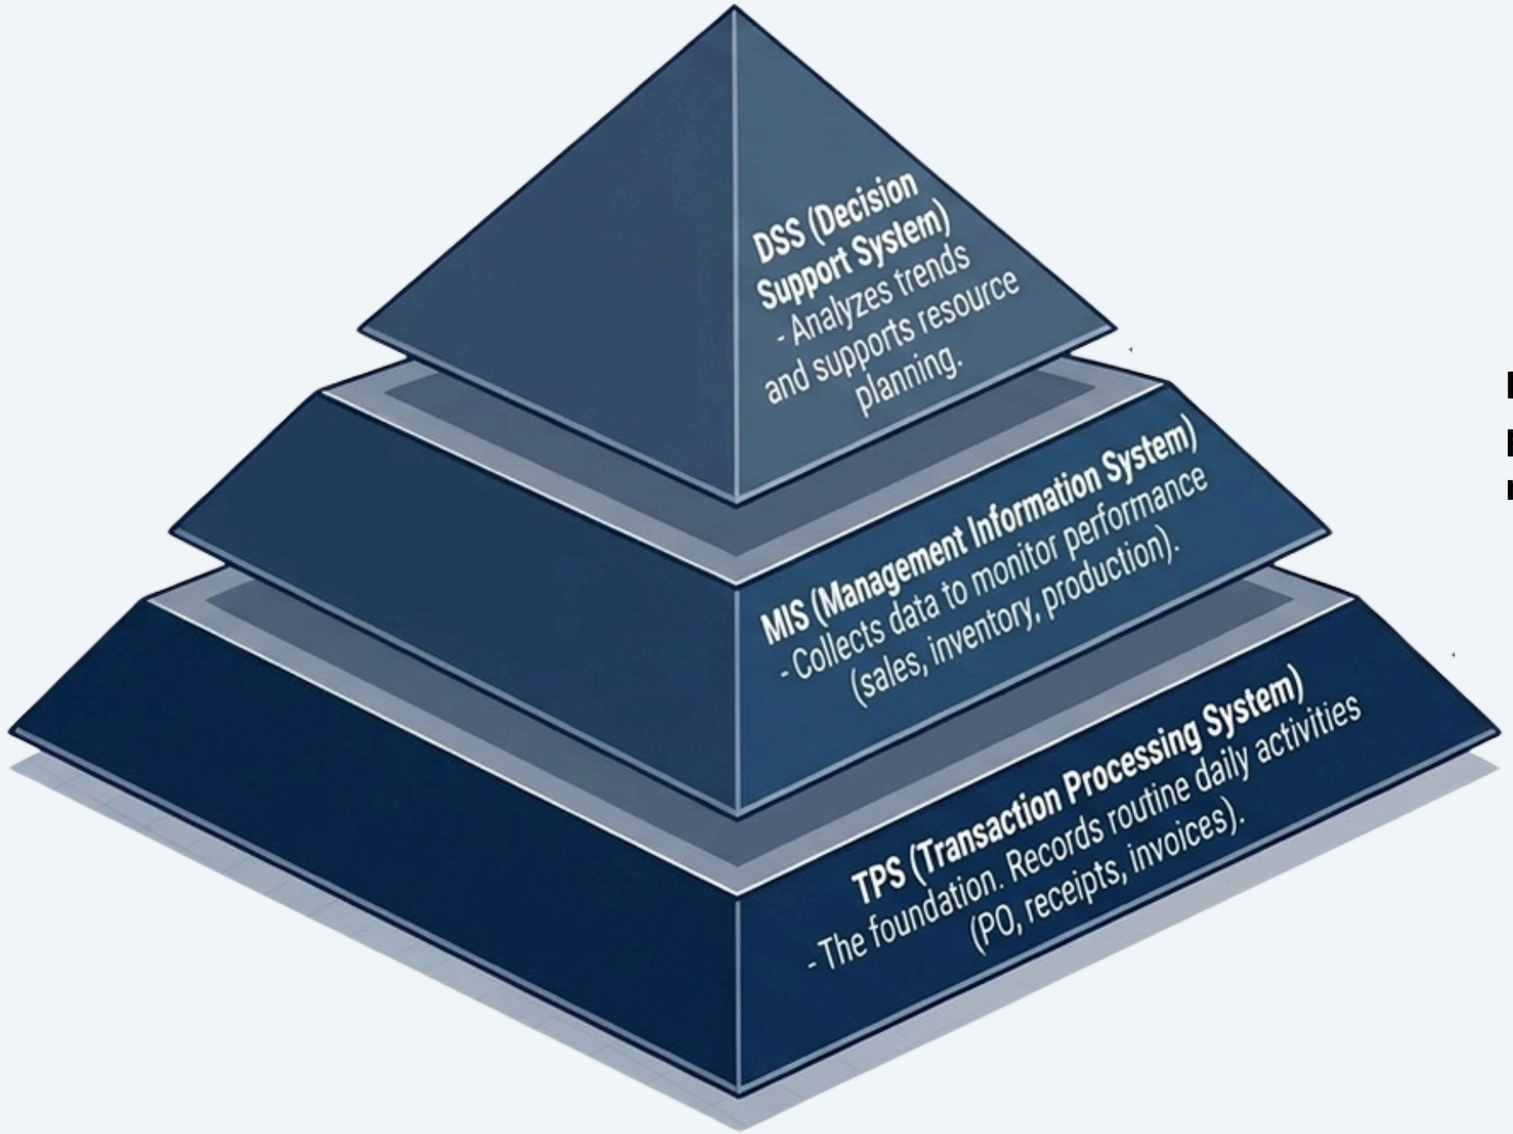

Consolidated executive reporting for the Rs. 492B asset base.

Major Business Processes:

Core Operational Foundations			
Finance & Accounting (Tracking costs across the chain)	**Human Resources** (Managing the 38k workforce executing the chain)	**Quality Management**	**CRM**

Current Information Systems

Gap Analysis:

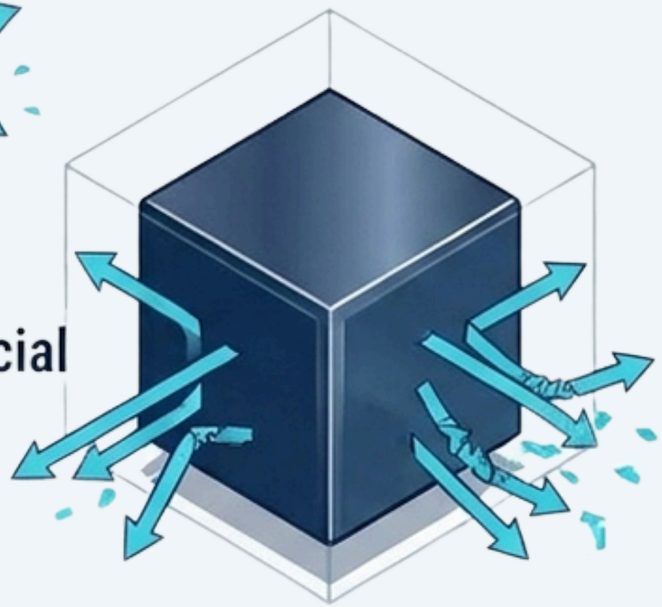

Data must be manually bridged between processing, reporting, and decision-making layers.

Other Information Systems

HRMS

Manages records, payroll, recruitment for 38,000+ employees.

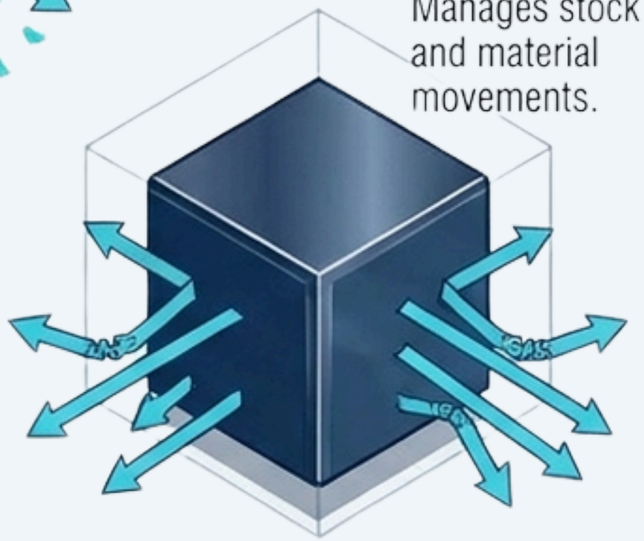

Accounting/Financial

Manages AP/AR, billing, and reporting.

CRM

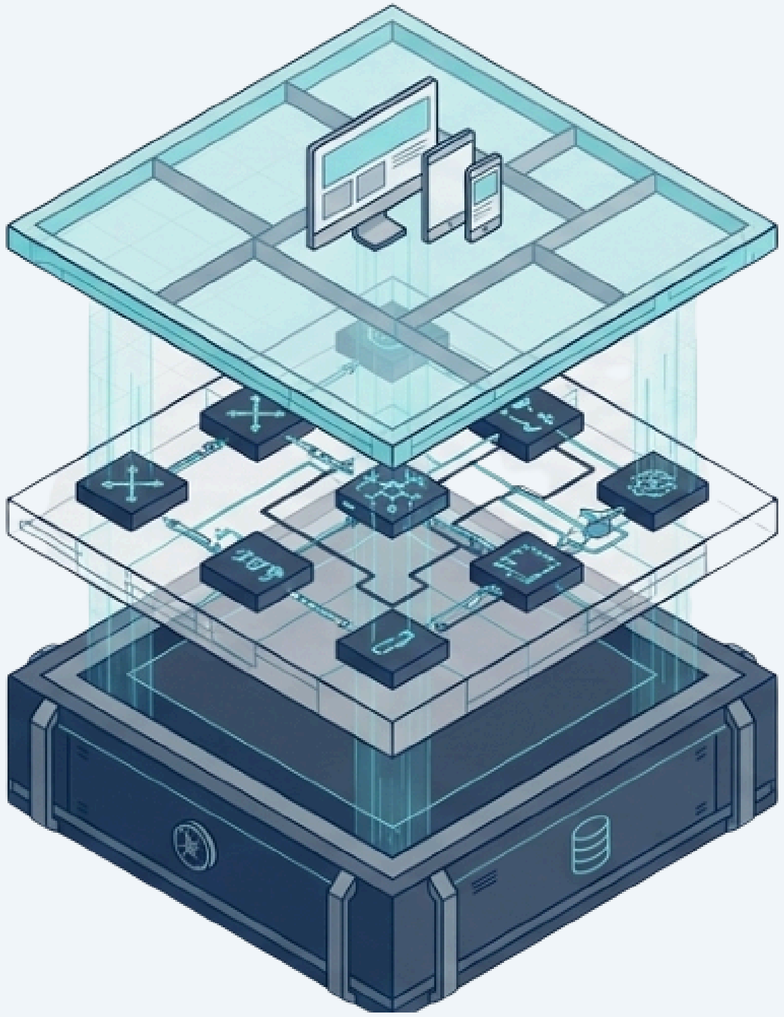

Manages interactions, feedback, and service for 1.6M customers.

Inventory

Manages stock levels and material movements.

Proposed ERP Architecture

Presentation Layer:
The user interface. Allows employees across 80+ countries to access the system seamlessly.

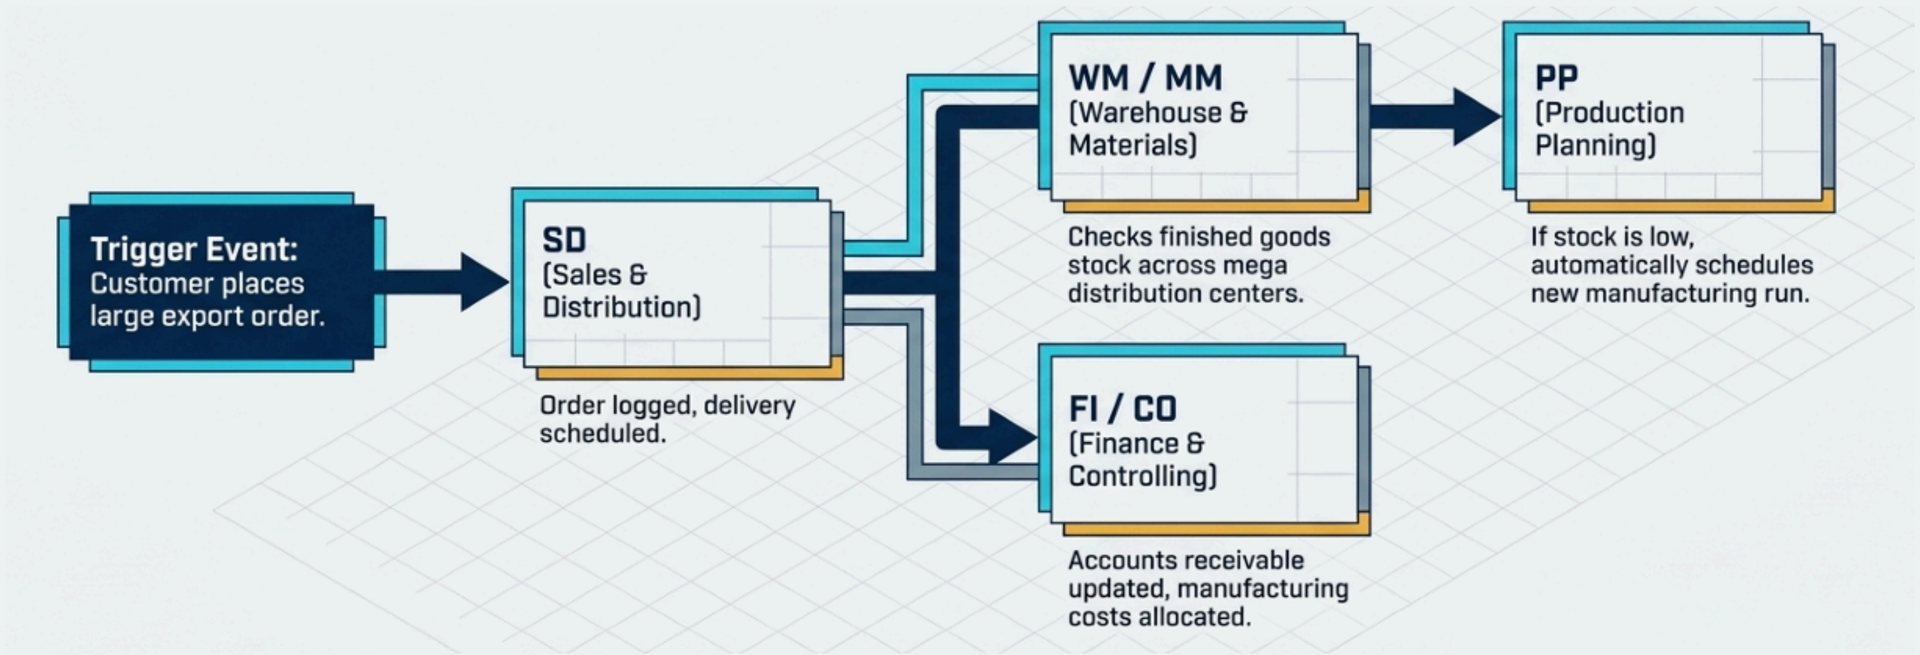

Application Layer:
The brain. Processes business transactions, executes logic/workflows, and connects all ERP modules.

Database Layer:
The single source of truth. Stores master data, transaction data, and system configurations securely.

Proposed ERP Modules:

Module Integration

One input. Instantaneous, enterprise-wide synchronization.

Expected Benefits

Current State (Legacy)	Future State (Integrated ERP)
Data Architecture Fragmented databases & data silos.	**A single, centralized source of truth.**
Process Flow Manual handoffs and duplicate data entry.	**Automated triggers across functional boundaries.**
Decision Making Reactive and delayed (via separate MIS/DSS).	**Proactive and real-time (via integrated FI/CO).**
Inventory Visibility Blind spots across 95 global facilities.	**End-to-end traceability from procurement to delivery.**

Conclusion

Hayleys will eliminate **data duplication, achieve real-time operational visibility, and empower faster, data-driven decisions** across its global footprint.
